

MURA SCREENS

Aluminum-framed MURA modular screen systems are available in a range of frame specifications and are custom-sized to meet your project requirements.

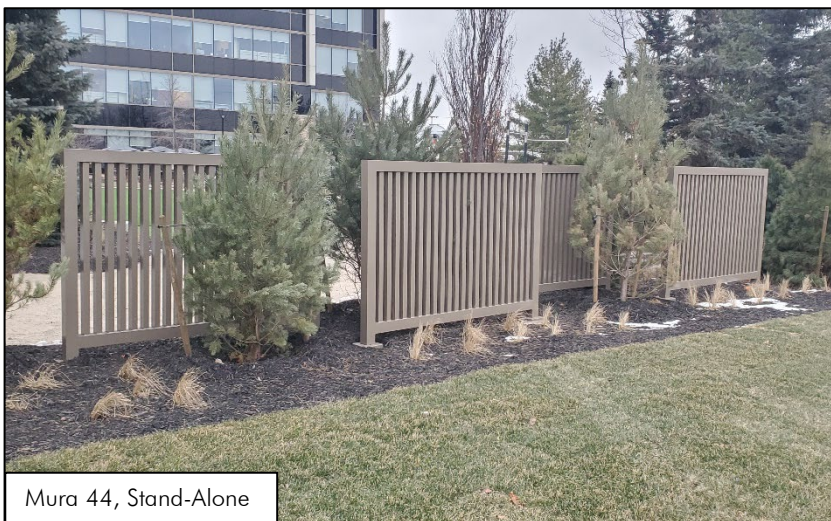

Screen systems can be specified independently or integrated within our structures.

We offer a wide range of frame sizes and panel options.

- Custom design and manufacturing
- Single unit or multi-section modular installation
- Stand-alone or attached configurations
- Internal wiring for power supply
- Bolt-down, embedded and custom mounting
- Super durable polyester powder coating

FRAMING

Model options provide post sizes to meet preferred design and location requirements. Spans between posts are subject to frame sizing and panel selection.

Posts can be surface mount or mounted below finished grade. Typical mounting plates are 4-bolt, with or without covers.

Top and bottom railing can be sized differently to post size.

PANELS

Aluminum members can be oriented with side-facing or flat-facing, spaced to design requirements. Wood members flat-facing only.

Flat aluminum panels are water-jet or laser-cut to meet the preferred design.
